Interim Management | Consulting

### **HOW RELIABLE AND TRUSTWORTHY IS AI?**

The whole world is talking about artificial intelligence (AI). With the latest advances in machine learning, computers are acquiring human abilities like seeing, hearing, and reading, while generative AI technologies can now create realistic images and complex texts. This Consenec Impuls talk takes us behind the scenes of AI technology and offers a closer look at the potential it holds as well as the challenges it poses, in particular concerning reliability and trustworthiness.

**Andreas Krause** is Professor of Computer Science at ETH Zurich, where he leads the Learning & Adaptive Systems Group. He studied computer science and mathematics at Technical University of Munich, earned his PhD at Carnegie Mellon University, and was assistant professor at the California Institute of Technology before taking on the ETH professorship. Krause is also Academic Co-Director of the Swiss Data Science

Center, chair of the ETH AI Center, member of the steering committee of the Swiss AI Initiative, and co-founder of the ETH spin-off LatticeFlow AI. He is an ACM Fellow, Max Planck Fellow, and has received ERC Starting Investigator and ERC Consolidator grants, the Rössler Prize, the German Pattern Recognition Award, and the ETH Golden Owl teaching award. In 2023, he was appointed to sit on the United Nations High-level Advisory Body on AI.

### **SCHEDULE**

Event begins at 5 pm. Presentation will held in German. Open discussion with the guest speaker after the talk and while refreshments are served.

Please register by e-mail to [info@consenec.ch](mailto:info@consenec.ch) by 12 November 2024 at the latest.

Seating is limited! You will receive a confirmation of registration.
